

A hand is shown touching the surface of water, creating ripples. The background is a soft, golden sunset over a body of water. The overall mood is calm and reflective.

AI

for occupational health

AI is everywhere, but nowhere is it more powerful than healthcare.

Occ health providers are realizing new ways to reduce clerical time and enhance the patient experience, powered by **Enterprise Health's** HIPAA-compliant Ozwell AI — the first healthcare AI pDSI-risk certified by Drummond.

Go confidently forward with Ozwell AI from Enterprise Health

The first — and only — AI platform developed specifically for occupational health, Ozwell AI provides real-time support to your clinicians, streamlining critical tasks, increasing productivity, assisting with clinical decision support and checking all the boxes for risk mitigation in healthcare AI.

Measurable gains in efficiency + clinician satisfaction

Ozwell AI reduces the administrative burden in your clinic, and puts the power of AI to work improving patient care...and clinician satisfaction. In a recent study, Ozwell shaved seven minutes off every encounter, and more than an hour on daily documentation. Clinicians can shift their focus from the keyboard back to the patient, from clerical recordkeeping back to cognitive care.

Certified + supported for regulatory compliance

As a highly specialized area in the artificial intelligence landscape, AI for occupational health comes with a significant set of requirements for safe, fair and appropriate use. Ozwell AI was developed with those standards at the forefront.

Independently reviewed for safety, transparency and regulatory alignment, Ozwell is the first healthcare AI to earn Drummond's pDSI certification, meeting stringent standards for risk management and compliance.

Enterprise Health also works closely with legal counsel to continually ensure regulatory compliance in a changing landscape, across local, regional and global geographies. Updated guidance on AI governance is proactively shared with Ozwell AI users via policy guides and webinars.

Seamless communication + documentation

As part of the Enterprise Health solution, Ozwell excels in streamlined communication — to patients, to peers and to management. It also automates essential documentation tasks including charting, SOAP notes and return to work letters.

Frequently used **prompts** include:

Summarize this chart for an occupational health nurse/physician

Draft a SOAP note

Summarize the plan we discussed for [employee]

Translate the employee's words into [language]

Draft a letter [about] addressed [to] in [language]

Ozwell AI can also assist with **clinical decision support** with prompts like:

Draft a follow-up plan for this employee

What didn't I discuss with the employee that I should have?

Is there anything else I should consider in my treatment plan?

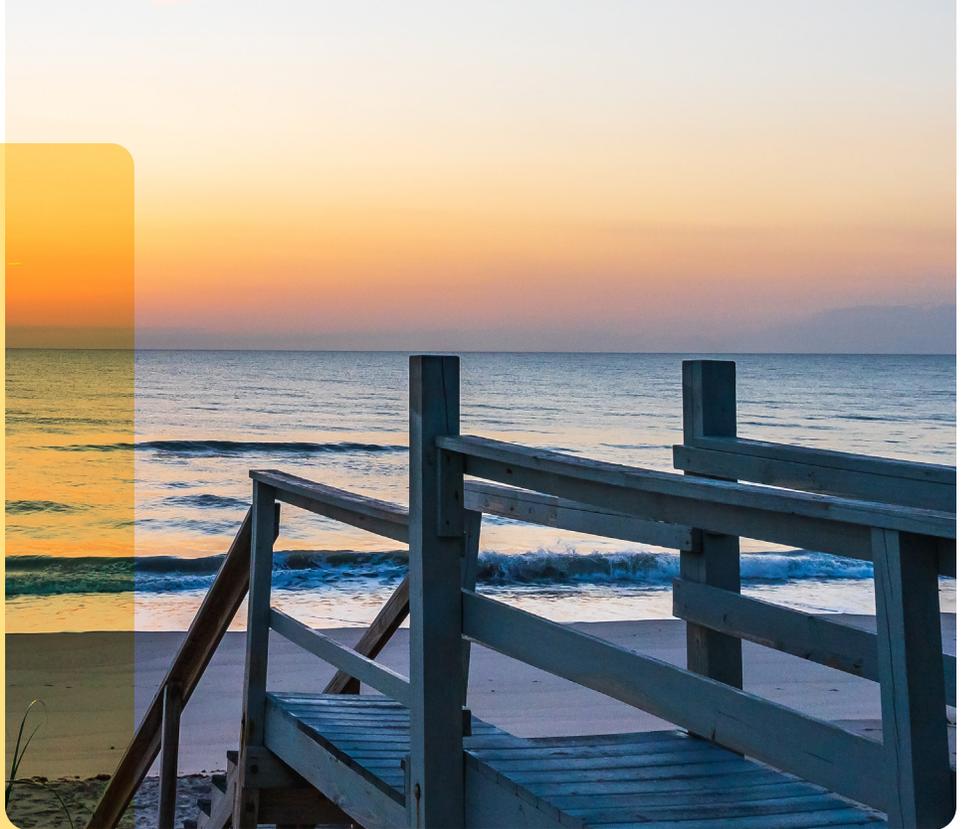

Ozwell in action

Ozwell AI simplifies encounter documentation and follow up so clinicians can focus on care.

Consider this sample workflow:

- Inside the patient chart, Dr. Occ launches Ozwell AI, which automatically associates all aspects of the encounter with the chart
- Dr. talks to text or types a prompt to request and review patient chart summary
- Dr. clicks the microphone (for ambient listening) and begins the patient interview
- When the interview is complete, Dr. asks Ozwell AI to provide a summary of the encounter, automatically removing irrelevant content
- Ozwell AI will:
 - Create a SOAP note
 - Produce an editable draft document Dr. Occ can use for creating chart notes and personalized return to work letters

User retains control over what documents are then added to the chart.

This is just the beginning

These prompts and workflows are for *inspiration*, not limitation.

Ozwell AI is always getting smarter, using what it learns to inspire new functionality to benefit *all* occ health clinicians and users.

Already in development, new **Smart Actions** will include added support for:

- Meds/allergies lists
- Conditions (ICD-10 codes)
- Vaccine history
- Injections
- Health surveillance

Take the first step now

Put the power of AI to work enabling your staff to finally realize the full value of your electronic health record — reducing administrative time, improving patient care and enhancing clinician satisfaction.

Put the power of **Ozwell AI** to work with confidence, guidance and support.

See for yourself.
